ABOUT

I discovered a passion for creating software while I was a business administrator at an SEO Web Design company. After working closely with the development team, I realized that I wanted to use software to solve problems, invent new products and services, and improve efficiency. I am passionate about ongoing learning, problem-solving, teamwork, and collaboration. I accelerated my career by enrolling in Nashville Software School, a Full Stack Software Development bootcamp in Nashville, TN.

EXPERIENCE

NASHVILLE SOFTWARE SCHOOL

Nashville Software School is an intensive, 6-month software development bootcamp that anchors learning in both individual and team-based project work.

Nutshell | Group project

Nutshell is an information dashboard where users can have access to all of their latest events, messages, news, and tasks. I participated in a group with four other students to develop Nutshell.

- Dynamically rendered elements to DOM using Javascript
- Implemented 'Tasks' saving, editing, and deleting
- Added session storage for saving user credentials
- Led stand ups and set daily goals
- Performed code reviews and troubleshooting issues

CONVERSION FIRST MARKETING

Conversion First Marketing is a leading SEO service and SEO based Web Design company serving the Middle Tennessee area.

Operational Specialist | 3/20 - Present

- Obtained and evaluated backlinks for clients
- Provided support for Facebook Live
- Optimized Google My Business listings
- Streamlined documentation and organization training
- Automated sales pipeline reducing data entry
- Optimized and restructured client SEO blogs
- Content writing and proofreading

Business Administrator | 1/18 - 10/18

- Onboarded client projects using Teamwork
- Improved data entry efficiency using Google Suite
- Retrieved and catalogued client assets for projects
- Evaluated external tools and developed new workflows
- Created internal training and documentation

PERSONAL PROJECTS

DOZE <https://github.com/ZaneBliss/doze>

Doze is an intelligent sleep journal that uses machine learning to analyze user data and come up with conclusions about how specific habits affect contribute to or detract from the user's quality of sleep. Written using Javascript, React, Brain.js and other libraries.

- Utilized React Router for app sections
- Implemented conditional rendering using Javascript
- Utilized Brain.js as Neural Network
- Added Chart.js for data visualization
- Included full CRUD functionality
- Used CSS3 and Flexbox for placing elements

SKILLS

- Javascript
- React
- CSS
- HTML
- JSON server
- Brain.js
- Chart.js
- React Bootstrap
- Git
- Github
